Interaction Storyboard

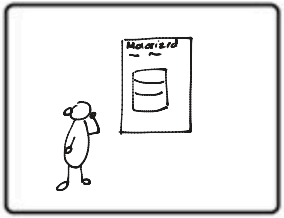

Sally is an elderly woman who recently transitioned to living alone

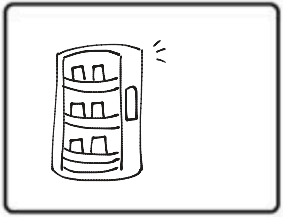

She oftentimes has difficulty reaching things in a traditional cabinet

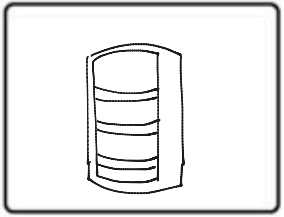

She struggles especially with reaching things at the back of cabinets

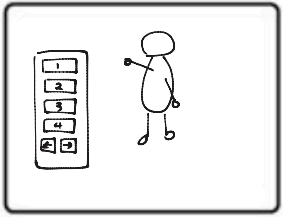

Then one day she sees an ad for a motorized rotating storage cabinet

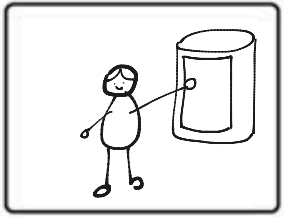

She gets the motorized rotating cabinet installed to see if it'll help her organize and reach things

Each of the shelves rotate. bringing things from the back to the front for easier reaching

Sally can use the panel on the side to choose which level to control

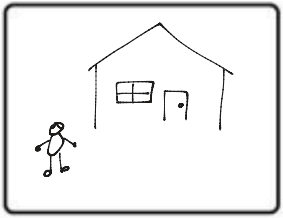

Now reaching things from the back of the cabinet is of no difficulty

Ecological Storyboard

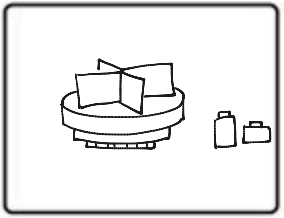

Sally is an elderly woman living alone.

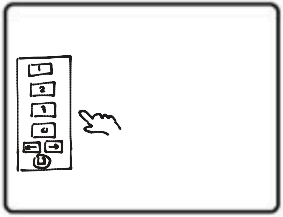

She struggles to reach things in the cabinets, especially in the back.

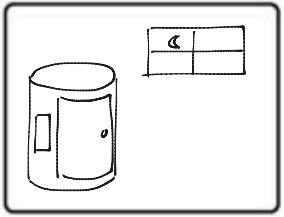

To help Sally reach the products in the back of the shelves we made Spin Shelf.

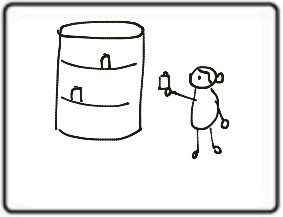

Spin Shelf is a convenient and accessible storage system.

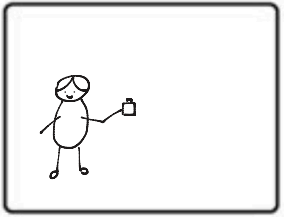

Sally can select a shelf and which section of the shelf to rotate to.

When not in use the door securely holds everything.

Family and caregivers can refill or organize supplies as needed.

Accessible storage allows Sally to have independent routines.
